Difference in CCNA 200-120 Version 2 and CCNA 200-125 Version 3

With the passage of the time the technology has grown at quite a fast pace and thus, the need of qualified and skilled IT professionals have also increased. In today's era more of the work is done via computer, tablets, smart phones etc. and a little bit of technical or network fault stops all the work. Hence, a qualified IT professional is of immense importance for any company.

For imparting the knowledge of the latest technology Cisco has also made changes in its certification course. **CCNA New version is getting launched** in the upcoming months and many major changes have been made in

the course. Many topics have been added and many of topics have been removed. The new version of CCNA is known to be version 3 and the new course is numbered as CCNA v3.0 200-125. The last date to appear for the CCNA v2.0 200-120 exam and ICND1 v2.0 100-101 is declared to be 20th august 2016. However last day to appear for ICND2 V2.0 certification exam is 24th September 2016.

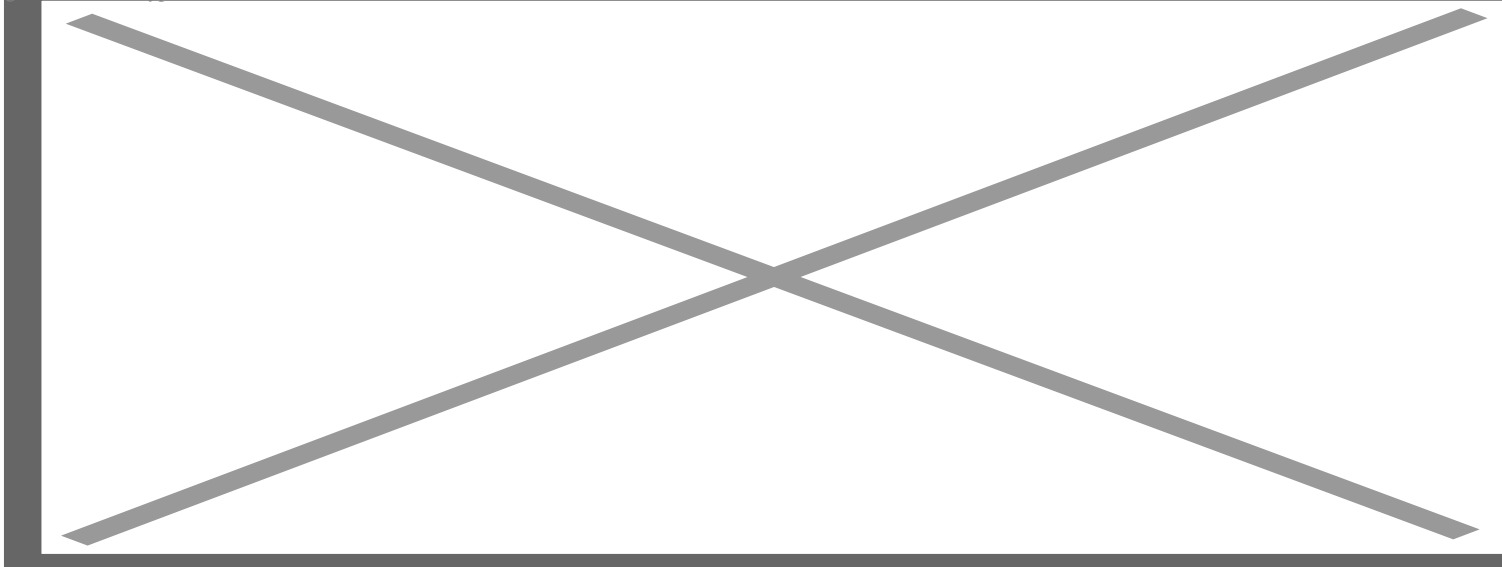

Changes made in CCNA new version

Below listed is a brief of the **Advancements** made in the new version of the CCNA.

New Topics added in syllabus of new version

- VPN topic is included in a detailed form and includes Client VPN technology, site to site VPN, and DM VPN.
- IPv6 routing – protocol, knowledge and configuration will be given more focus.
- QoS concept to be taught in detailed to the students which will include policing mechanism, shaping, marking etc.
- A deep knowledge on cloud resources which are deployed in almost every enterprise today
- A deep awareness on programmable network architectures as well as separation of data plane and control plane.
- In addition lab sessions for extended practice will be designed for giving a deep understanding to the students.
